Projects

Real Estate Marketplace Backed By Asian Sol
Role: Backend Laravel Developer
Employer: Asian Solution
As a Backend Laravel Developer at Asian Solution, I played a pivotal role in the development of a sophisticated Real Estate Marketplace. This project aimed to provide users with a seamless platform to buy, sell, and rent properties online.

Key Responsibilities and Achievements:
Laravel Development: Led the backend development using Laravel, a powerful PHP framework, to create a robust and scalable application architecture.
User Authentication & Authorization: Implemented secure user authentication and authorization mechanisms to ensure data privacy and role-based access control.
Property Listings Management: Developed features for sellers and agents to easily upload and manage property listings, including details such as descriptions, images, prices, and amenities.
Search & Filtering: Integrated advanced search and filtering functionalities to enable users to find properties based on location, type, price range, and other criteria.
Transaction Handling: Implemented secure transaction handling and payment gateways, enabling seamless property transactions between buyers and sellers.
API Integration: Worked on integrating third-party APIs for services like geolocation, property valuation, and map visualization to enhance the platform's functionality.
Database Design & Optimization: Designed and optimized the database schema for efficient storage and retrieval of property data, ensuring high performance and scalability.
Collaboration & Testing: Collaborated closely with frontend developers, UI/UX designers, and QA engineers to deliver a user-friendly and bug-free application.
Continuous Improvement: Contributed to ongoing maintenance and updates, incorporating user feedback and industry best practices to improve the platform's usability and performance.
Technologies Used:
- Laravel (PHP)
- MySQL
- RESTful APIs
- JavaScript
- HTML/CSS
- React js
- Payment Gateways (e.g., Stripe)
- Third-Party APIs (e.g., Google Maps API)
